## PREFACE

This checklist forms part of a series prepared for the United Kingdom's Scientific Authority for Animals to assist in implementing the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES).

For reasons explained in the introductory notes it was decided not to include non-CITES taxa listed in the Red Data Books in this volume. However the remainder of the format is the same as that used in the companion checklists for higher animal classes and we hope that it will prove just as useful to those assessing applications for CITES permits to import and export animals.

The Nature Conservancy Council, as the United Kingdom's Scientific Authority for Animals is grateful to Patricia C. Almada-Villela of the IUCN Conservation Monitoring Centre for compiling this document on its behalf.

## ACKNOWLEDGEMENTS

This checklist was produced by the IUCN Conservation Monitoring Centre, Cambridge, under contract HF3-10-09(F) from the Nature Conservancy Council of the United Kingdom.

Compiled by: Patricia C. Almada-Villela

Contributions from: N. Mark Collins (Insecta and Araneae)  
Tim Inskipp (All taxa)  
Simon J. Moore (Antipatharia)

The compiler is extremely grateful to Perla C. Almada-Villela and to the staff of the IUCN Conservation Monitoring Centre for their invaluable assistance, especially Steven Broad, John Caldwell, Brian Groombridge, Martin Jenkins, Zbig Karpowicz, Nick Phillips, Alison Suter and Jane Thornback. Thanks also to Susan M. Wells, formerly of the IUCN Conservation Monitoring Centre, and Jonathan L. Watkins.

The various draft sections of this publication were kindly reviewed by C. Almaca, P. Beron, M. Boeseman, P. Ceballos, J. Chambers, P. Cornelius, M.J. Dadswell, G.B. Delmastro, P.S. Economidis, J.M. Elliott, I. Flasar, C.A. Goncalves da Cruz, J.-P. Gosse, P.H. Greenwood, M.G. Hadfield, B. Herzig, J. Holcik, R.I. Johnson, G. Jonsson, M. Kottelat, D.E. McAllister, J.L. Munro, J. Nielsen, H. Nijssen, N.-A. Nilsson, J.D. Ovington, P. Pethon, R.T. Sawyer, G.G. Scoppettone, T.I.J. Smith, J. Toth, S. Vigg, K.J. Walker, D. Ward, A. Wheeler and E. Wood, to whom CMC is most grateful.

## INTRODUCTORY NOTES

The purpose of this work is to provide a list of the species and subspecies of fish and invertebrates included in Appendices I, II and III of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES). Other checklists in the same series have also included all species listed in the IUCN Red Data Book. This volume departs from this standard and only makes reference to the Red Data Book status of the CITES listed species. This is because Pisces and Invertebrata are such large groups that a great deal still remains to be done before we can have an evaluation of the status of many species. Thus, the Red Data Books for these two groups are not comprehensive reviews of all the threatened species, but instead contain only representative examples of the types of threats suffered by these groups.

The status of the listed species is taken from the 1986 IUCN Red List of Threatened Animals. The Red List is a summary of information on all taxa known to be at risk. Additional information can be found in Miller [71], Wells [395], and Collins and Morris [81], together with unpublished data sheets for North American fish taxa dated 1983, 1984 and 1985 held at the Conservation Monitoring Centre.

For each taxon, the scientific name is given first, with the currently most frequently used synonyms in brackets. Common names appear on the following lines, below which the geographical range is indicated. The numbers appearing in square brackets refer to entries in the reference list at the back of this document.

## GEOGRAPHICAL RANGE

The geographical range of each taxon is given in terms of political units, listed in alphabetical order. The political names used are those in common usage and not necessarily diplomatically correct.

When a taxon is found within one or only a few restricted areas within a larger political unit, the name of the smaller area is given in brackets, e.g. Indonesia (Kalimantan).

When the name of a country is given as within the range of a certain taxon, that taxon may or may not occur throughout the country and may even occur only peripherally.

Without surveying the range of each taxon in the field, it is necessary to rely on published records. Most taxonomic works give the range of a taxon in terms of broad geographical areas, rather than of political units. While some countries have a relatively well-known and well-reported fish and invertebrate fauna, some others do not. These factors may occasionally have resulted in some of the geographical ranges given here being incomplete or inaccurate, but every effort has been made to prevent this.

## EXPLANATORY NOTES

For each taxon there may be coded entries in any of the four columns down the right-hand side of the page. Under CITES, I, II or III refers to the CITES Appendix on which the taxon is listed, as at 22 October 1987.

Entries under RDB indicate the IUCN category status:

- E = Endangered
- V = Vulnerable
- R = Rare
- O = Out of danger
- K = Insufficiently known
- Id = Indeterminate (given as 'I' in RDB, but modified here to avoid confusion with the CITES 'I' entry)
- CT = Commercially threatened

Exp: Major exploitation of taxon; where known, a category of secondary importance is given in brackets.

- BM = Building material (coral for construction work, etc.)
- Der = Derivatives and other products containing derivatives (eg hirudin)
- F = Food (which may include local and/or commercial use)
- LA = Live animal trade (for pets, medical research, zoos, etc.)
- P = Part or whole shell used as seed pearls
- Pr = Preserved specimens
- S = Shells and corals (decoration, tools, wash basins, jewellery, etc.)
- T = Trophies

Ref: The numbers in the column on the far right refer to entries in the reference list at the back of this document. These references may contain information on the status, distribution or nomenclature of the taxon in question. References which refer to the taxon in only a limited part of its range are generally excluded from this column and, instead, included in square brackets at the appropriate place(s) within the geographical range information.

After the scientific and common name of each taxon, the countries or other political units of occurrence are listed alphabetically. Country names in square brackets [ ] indicate that the taxon is introduced there and does not occur naturally. The following abbreviations are used to indicate the status of the information or of the taxon:

- ? = may occur; e.g. records may be conflicting or unconfirmed
- (ex) = extinct, but used to occur
- (ex?) = known to have occurred in recent times, but may now be extinct
- ?(ex) = may have occurred but does not now

## NOMENCLATURAL SOURCES AND NOTES

The Conference of the Parties to CITES has not adopted any standard nomenclature for fish and invertebrates with the exception of the work by B. D'Abrera [90] on which the names for the birdwing butterflies are based. The present checklist therefore follows the names listed in the CITES Appendices. However, where the names used differ from those included in Nelson [73] and Parenti [78] for fish and Parker [252] for invertebrates, the synonymy used by these works has been noted.

The systematics of invertebrates have been the subject of numerous studies. Therefore, the nomenclature used for some of the CITES listings may differ from that in the latest scientific reviews, as CITES may not yet have been able to follow these changes. In particular, there have been extensive revisions of the papilionid tribe Troidini and the pearly mussels of the family Unionidae. Most of these changes have been noted in this text.

Miller [229] has radically reviewed the taxonomy of the Troidini and united all the birdwing butterflies in the single genus Troides with two subgenera: Troides (including Troides, Ripponia and Ornithoptera) and Trogonoptera. It remains to be seen whether this rearrangement will meet with general acceptance; if it does, it would be useful for the CITES Nomenclature Committee to review these taxa. A table has been included in the text to help clarify the problem of the complex taxonomy of the Ornithoptera priamus group.

Similarly, the taxonomy of the Unionidae species was reviewed in 1978 by Johnson [186] who transferred many of the Epioblasma species to other genera. A monograph on other species in the same family was published in 1980 by Johnson [187].

The taxonomic scope and sequence of orders follows the system adopted in the Appendices to CITES.

The common names used have been taken from the IUCN Red Data Book series and from a number of standard reference works for fish and insects of particular regions. Secondary common names have been included wherever this was considered useful, including non-English names commonly used by English speakers.

\* = recognized by author(s) as a subspecies of O. priamus

+ = recognized by author as a full species

0 = unknown to these authors; described by Parrott (1985)

Various forms of O. p. poseidon are occasionally cited or sold as separate subspecies. These include:

archideus from Indonesia (Waigeo)

cronius from SW coast of Irian Jaya, Indonesia

demophanes from PNG (Fergusson, Trobriands)

pronomus or macalpinei from The Iron Range, Cape York,  
Australia

teucus from Indonesia (Biak and Schouten)

NB. Includes the subgenera Polyastra and Pseudocolumnastraea. There is great variability within the species, it is possible that only around 12 or 15 species occur within the Indo-Pacific region as a whole.

Family Fungiidae

Fungia spp.

(15 or 20 species)

Button Corals, Feather Corals, Mushroom Corals, Razor Corals  
 American Samoa (USA), Australia [247], Brunei, Burma, Chagos Arch. (UK), China [406], Comoros, Djibouti, Egypt, Ethiopia, Federated States of Micronesia (USA), Fiji, French Polynesia (France), Guam (USA) [162], Hawaii (USA), Hong Kong (UK), India, Indonesia [36], Japan, Jordan [227], Kenya, Kiribati, Madagascar, Malaysia [101], Maldives, Marshall Is (USA), Mauritius, Mayotte (France), Mozambique, New Caledonia (France), Northern Mariana Is (USA), PNG, Palau (USA),

II - S, 107,363,  
 (LA) 364,391,398

Philippines [6], Pitcairn I. (UK), Reunion (France), Saudi Arabia, Seychelles, Singapore [69], Solomon Is, Somalia, Sri Lanka, Sudan [382], Taiwan [63], Tanzania, Thailand, Tonga, Vanuatu, Vietnam, Wallis and Futuna (France), Western Samoa

*Halomitra* spp.

II - S 363,398

(possibly 2 species)  
 Bowl Corals, Neptune's Cap Coral  
 American Samoa (USA), Australia [379], Brunei, Burma, Chagos Arch. (UK), China, Comoros, Federated States of Micronesia (USA), Fiji, Guam (USA), Indonesia, Kiribati, Madagascar, Malaysia, Maldives, Marshall Is (USA), Mayotte (France), Nauru, New Caledonia (France), Northern Mariana Is (USA), PNG, Philippines, Seychelles, Singapore, Thailand, Tonga, Tuvalu, Vanuatu, Vietnam, Western Samoa

*Polyphyllia* spp.

II - S 398

(probably only one species, see footnote)  
 Feather Corals, Slipper Corals, Joker's Boomerang Corals  
 American Samoa (USA), Australia [379], Brunei, Burma, Chagos Arch. (UK), China, Comoros, Cook Is (New Zealand), Federated States of Micronesia (USA), Fiji, Society Is - French Polynesia (France), Guam (USA), India, Indonesia, Kenya, Kiribati, Madagascar, Malaysia, Maldives, Marshall Is (USA), Mauritius, Mayotte (France), Nauru, New Caledonia (France), Northern Mariana Is (USA), PNG, Philippines, Reunion (France), Seychelles, Singapore, Solomon Is, Somalia, Sri Lanka, Taiwan, Tanzania, Thailand, Tonga, Tuvalu, Vanuatu, Vietnam, Western Samoa

NB: There is considerable intraspecific variability in Polyphyllia and as a result it has been described as 8 species belonging to 3 genera (Polyphyllia, Cryptabacia and Lithactinia). It is now considered that all past names are synonyms of the single species P. talpina (379).

The Nature Conservancy Council is the body responsible for advising Government on nature conservation in Great Britain. Its work includes the selection, establishment and management of National Nature Reserves; the selection and management of Marine Nature Reserves; the identification and notification of Sites of Special Scientific Interest; the provision of advice and dissemination of knowledge about nature conservation; and the support and conduct of research relevant to these functions.

This is one of a range of publications produced by Publicity Services Branch. A catalogue listing current titles is available from Dept FCL, Nature Conservancy Council, Northminster House, Peterborough PE1 1UA.
